

What is Interbio ?

Interbio is a leading South-West European life sciences and biotechnology cluster that aims to advance research and innovation through interregional and interdisciplinary cooperation.

Interbio brings together research institutions, technology platforms and companies from the Barcelona, Bordeaux, Lisbon, Toulouse and Valencia areas.

What is a technology platform?

It is the combination, on a single site, of advanced research instrumentation and dedicated scientific expertise.

These research and innovation resources are available to public and private organizations through contract services or collaborative projects.

How can you take advantage of Interbio technology platforms?

- Search the Interbio website to find the expertise you need within the Interbio community.
- Develop collaborative research projects with the support of Interbio
- Set up staff exchanges in the frame of Interbio so as to grow your technical skills.

To learn more about Interbio technology platforms, visit the Interbio website or contact your local Interbio coordinator.
